Pre-Notification of Tender

Solidification/Stabilization and Channel Construction of the Sydney Tar Ponds

The Sydney Tar Ponds Agency wishes to notify all interested contractors that the tender release date is approaching for the Solidification and Stabilization of the north and south tar ponds located in Sydney, Nova Scotia, Canada. About 550,000m³ of sediments within the Tar Ponds are to be treated in-situ using Solidification/Stabilization technology as part of the overall cleanup of the Sydney Tar Ponds and Coke Ovens sites. The Tar Ponds resulted from the deposition of heavy oils and other substances from nearly a century of steelmaking.

Expected tender release: winter, 2008

Expected award: spring, 2009

Contract estimate: \$50+ million

Contract completion: December, 2012

Services to include:

- Selection of Preferred Mixing Technology.
- Develop mix proportions and select reagents.
- Carry out benchscale testing to confirm selected mixture meets project specific criteria.
- Implement mixture to full-scale to successfully complete Solidification/Stabilization treatment of the sediments within the Tar Ponds and within agreed project schedule.
